

THE COUNCIL OF TAMPERE REGION

Innovative special needs home-Learning project

”Home project”

Home, part of new innovations

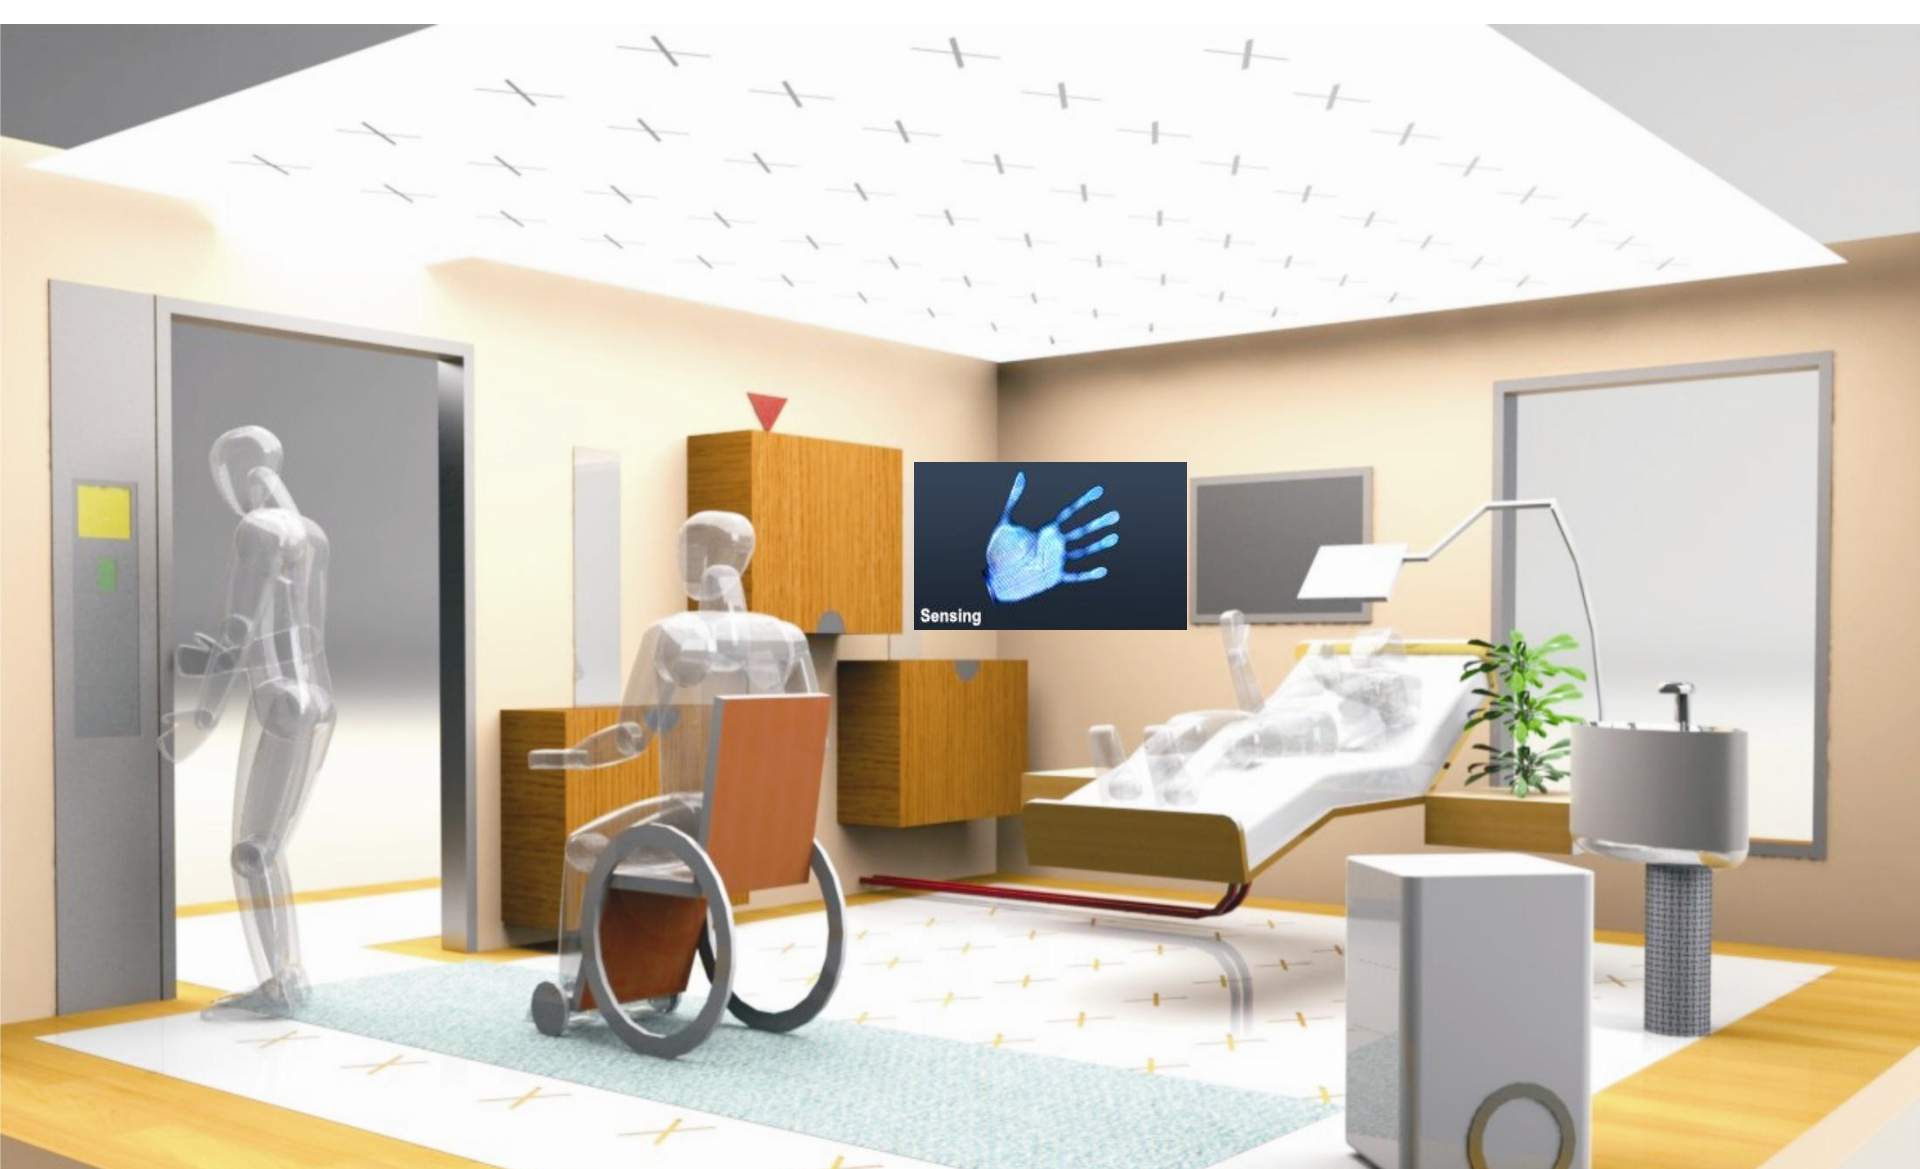

Hannu Kaunisto

Background

- The number of old people is increasing fast in western countries. Care of people with poor health is very expensive, so getting by at home as long as possible is very important in the future.
- New technology applications needed more and many kind peoples will use those.

Main target:

- The project will combine various professional fields such as social and health care nurse training, technology and transport mechanic training. Part of teaching is the new automated machines and equipment, as well as robotics and intelligent solutions for the differentiation of use of teaching curriculum. Development makes it possible to create a new combination of different professional skills.
- Develop the welfare and health care, construction and installation training content.
- Learning environment for training providers, healthcare organizations, corporations, employees, tools in need and their families use.
- new learning environment, where you can, test and learn, -> then you can use without ..!
- Pirkanmaa renew knowledge and economic structures with new innovations and generate new business and existing businesses to ensure continuity.
